Summary

I am a Software Engineer with 3+ years of experience in high-impact Software Development and SaaS platform engineering. Expert in applying Object Oriented Programming, Data Structures, and Algorithms to develop scalable healthcare technology and medical practice management solutions. Proven track record of implementing maintainable domain models and secure, multi-tenant architectures within an Agile environment.

Work Experience

Full-Stack Software Engineer

February 2023 – Present

INDEPENDENT / FREELANCE

- Develop and maintain production-oriented software systems with a focus on Software Development fundamentals, including Data Structures and Algorithms for optimized data processing.
- Implement multi-tenant SaaS architectures and medical practice management styles of logic using Object Oriented Programming (OOP) to handle complex, secure data modeling.
- Collaborate on the design of maintainable domain models using Domain-Driven Design (DDD) and Clean Architecture to isolate core business logic from infrastructure.
- Maintain robust financial and billing workflows using Spring Boot and Java, ensuring transaction safety and idempotency for 10,000+ data entries.
- Develop comprehensive Unit Testing and integration tests using database-backed environments to validate healthcare technology API contracts and system behavior.
- Utilize Version Control and Agile Methodology to iterate on full-stack applications, integrating React/Next.js frontends with high-performance Kafka and Redis event infrastructure.

Education

Bachelor of Science (BSc) in Computer Science

Present

TOM MBOYA UNIVERSITY, HOMABAY, KENYA

Additional Skills

Core Software Engineering: Software Development, Object Oriented Programming, Web application development, Data Structures, Algorithms, Computer Science Fundamentals, Clean Architecture, SOLID principles

Backend & Systems: Java, Spring Boot, Spring Data JPA, Hibernate, REST APIs, SQL, PostgreSQL, Flyway, Redis, Kafka

Frontend & Mobile: React, Next.js, TypeScript, JavaScript, React Query, Android Development, iOS Development

Methodologies & Tools: Agile Methodology, Unit Testing, Integration Testing, Version Control, Cloud Platforms, Docker, OpenAPI, JWT Authentication

Projects

RentManager - Multi-Tenant Property Management SaaS

Architected and deployed a multi-tenant property-management SaaS platform covering properties, units, tenants, leases, payments, maintenance, subscriptions, and organization management. Designed tenant-aware domain architecture using UUID identifiers, tenant-scoped persistence, domain boundaries, aggregates, and domain events. Implemented lease lifecycle workflows including approval, activation, termination, and renewal. Built M-Pesa-based payment and billing capabilities with idempotent transaction handling. Developed the Next.js web application and integrated it with the Spring Boot backend. Developed a companion mobile application for both Android and iOS. Implemented PostgreSQL database migrations with Flyway and containerized application infrastructure using Docker.

Technologies: Java 21, Spring Boot, PostgreSQL, Flyway, Docker, Redis, Kafka, React, Next.js, TypeScript, React Query, Clerk

whatsapp-persona-bot

Auto-replies to WhatsApp messages in your own voice while you're offline, learns your writing style over time, and pitches freelance work to leads.

Technologies: JavaScript, API integration, Git

Professional Focus

- Backend & Full-Stack Software Engineering
- SaaS Platform Engineering
- Java & Spring Boot Development
- Multi-Tenant Systems
- Domain-Driven Design
- Software Architecture & System Design
- Payment & Financial Systems
- API & Integration Engineering
- React / Next.js Development
- Mobile Application Development
- Production-Oriented Engineering

Notice period

- I am available and ready for the job immediately you contact me.

Working style

- Working out of passion and this makes me to stay committed to building since it feels natural to me, a field I love the most.
- I highly value time and I can't afford to waste any. I work extra hours to make sure everything that is scheduled does not miss.
- Clear communication on the project progress or any critical decisions to make sure I achieve the desired goals and expectations.
