SUMMARY

Full-stack software engineer with 3+ years of independent experience building and deploying complete systems: Java 21, Spring Boot and PostgreSQL on the backend; React, Next.js and TypeScript on the web; React Native on mobile. Sole engineer of **RentManager**, a deployed multi-tenant rental-management platform with M-Pesa Daraja payments (Safaricom sandbox), **1,588 automated backend tests** and a public live demo. Strongest where correctness matters most: payments, ledgers and records a business cannot afford to get wrong.

EXPERIENCE

Full-Stack Software Engineer — Independent / Freelance Feb 2023 – Present • Remote

- Design, build and deploy full-stack systems end to end: data model, Spring Boot APIs, React / Next.js and React Native (Expo) clients, and cloud hosting.
- Architect multi-tenant SaaS with Domain-Driven Design and Clean Architecture, keeping business rules independent of the framework and the database.
- Build idempotent, transaction-safe billing and payment workflows (M-Pesa STK Push and B2C), test critical paths against real PostgreSQL, and ship in small, reviewed increments with Git and GitHub Actions CI.

PROJECTS

RentManager — Multi-tenant property management SaaS Source: [backend](#) • [web](#) • [mobile](#)

Live: www.rentmanagerke.workers.dev • web on Cloudflare Workers • API on Render • PostgreSQL on Neon

Java 21 • Spring Boot 3 • PostgreSQL • Flyway • Next.js 16 • React 19 • TypeScript • React Native (Expo) • Clerk • M-Pesa Daraja

- Designed, built and deployed the whole product alone: a modular monolith of **20 modules** (ports and adapters) covering properties, leases, rent, deposits, reservations, maintenance, tax and platform administration.
- Integrated **M-Pesa Daraja** both ways, STK Push for rent collection and B2C for landlord payouts (sandbox), with idempotency guards and duplicate-callback handling that never drops a payment already made.
- Designed an **append-only rent ledger** where a correction is a linked reversal, never an edit, and evolved the schema through **99 Flyway migrations**, none edited after running.
- Enforced tenant isolation from the verified JWT claim, never a client header, at the authorization and repository layers.
- Wrote **1,588 backend tests** with JUnit 5, Mockito, Testcontainers and ArchUnit, covering the money paths first.
- Delivered a **60+ route** Next.js web app and a **27-screen** React Native app sharing one OpenAPI-generated typed client.
- Operated with health checks, Prometheus metrics, GitHub Actions CI, Sentry crash reporting in the mobile app and encrypted off-site database backups kept for 90 days.

whatsapp-persona-bot — AI-assisted WhatsApp auto-responder Source on [GitHub](#)

Node.js • Baileys • Anthropic Claude API • pino • pm2

- Personal tool that answers WhatsApp messages in my own writing style while I am offline, with guard rails: per-chat rate limits, silence once I reply, an ignore list, no prices or commitments, and a log of every message sent.

TECHNICAL SKILLS

Languages	Java, TypeScript, JavaScript, SQL
Backend	Spring Boot, Spring Security, Spring Data JPA / Hibernate, REST, OpenAPI, JWT
Data & payments	PostgreSQL, Flyway, append-only ledgers, M-Pesa Daraja (STK Push, B2C)
Web & mobile	React, Next.js, TanStack Query, React Native (Expo)
Architecture	SOLID, Clean Architecture, Domain-Driven Design, multi-tenancy, transactional outbox
Testing	JUnit 5, Mockito, Testcontainers, ArchUnit, Vitest, Jest
Delivery	Docker, Git, GitHub Actions, Render, Cloudflare Workers, Neon, Agile; AI-assisted development (Claude, Codex, Aider) with every change reviewed

EDUCATION

BSc Computer Science — Tom Mboya University, Homabay, Kenya Expected 2028
